

EASY VERGETRIM

FITTING GUIDE

FEATURES AND BENEFITS

- ✓ Unique continuous verge system for slates.
- ✓ Developed with no undercloak to meet Scottish and refurbishment market standards.
- ✓ Maintenance free; quick and easy to install.
- ✓ No streaking or staining.
- ✓ Suitable for both natural and fibre cement slates.

Made from high grade material, Permavent EASY VERGETRIM is a continuous dry verge system providing an aesthetic, long-lasting and unobtrusive finish to the verge.

INSTALLATION GUIDANCE

At the verge, cut the battens level with the bargeboard/ brickwork. If there is an end rafter fix the battens into place.

Fit the Permavent EASY VERGETRIM ensuring it has a 50mm overhang at the eaves (Fig.1).

Should a sprocket (change of elevation) eave occur or the requirement to connect one to the other, simply overlap the top section over the bottom with a 75mm overlap, trimming the gasket by the same amount (Fig.2).

Mark where the VERGETRIM overlaps the bottom section and trim off to achieve a neat streamlined finish (Fig.3).

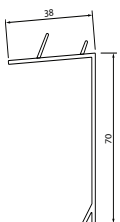

Continue slating the roof over the verge unit ensuring that the slates overhang the verge by no less than 38mm and no more than 50mm in line with BS 5534:2014+A2:2018 Slating and Tiling for Pitched Roofs and Vertical Cladding. Code of Practice. (Fig 4.)

Permavent EASY VERGETRIM can also be installed in fully-supported applications, such as Scottish sarking boards. For further information please contact our technical team.

DO NOT use cut slates less than 150mm wide for verge or abutments.

Permavent EASY VERGETRIM should be installed in conjunction with continuous substrates, such as uniform rafters or softwood sarking. If there is a change-of-elevation or traditional eave-sprocket within your design, please contact our technical team for further guidance.

EASY VERGETRIM DIMENSIONS AND PACK QUANTITIES

Easy Vergetrim: 1.5m length. Pack of 20.
